

NVS Acoustic AOV Louvre

NVS Acoustic AOV Louvre

Applications

Features:

SE Controls provide a range of automated NVS Acoustic AOV Louvres that can be included within the natural ventilation strategy to reduce the internal temperature of the building or to exhale the stale air out of the particular area, included within a cross ventilation or single sided ventilation solution.

Typically, NVS Acoustic AOV Louvres are implemented into either the external facade of the building to reduce the external noise entering the area of natural ventilation.
