

NVS Glazed Louvre

Providing Louvred natural ventilation

NVS Glazed Louvre

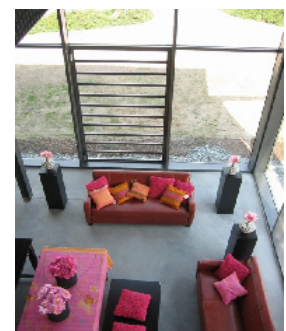

Applications

Features:

With a maximum opening angle of 90 degrees, SE Controls NVS Glazed Louvres provide a large free area of ventilation compared to standard window constructions, that enables their use in a variety of applications for single sided and cross ventilation strategies.

- SE Controls louvre windows can be anodised, powdered coated in all standard RAL colours.
- The double glazed unit thickness is available in either 24mm or 28mm.
- Louvres can be incorporated into curtain wall frames that are available in mounting thicknesses of 24 to 40mm.
- The units are sealed with continuous EPDM profiles.
- Finger trap protection is optional depending on louvre location (EN60335-2-103:2003).
- Powered louvre motors are 24V DC powered open and powered close
- Motors are available with a current draw of 0.65 to 0.85A
